

ABSTRACT OF THE DISCLOSURE

09/665 q81

5 A twinkle bulb light set includes, alternately from one end
of the light set to an opposite end of the light set, at least one standard bulb
socket configured and dimensioned to operatively receive a standard or steady-
burning bulb and at least one non-standard bulb socket configured and
dimensioned to operatively receive a non-standard twinkle bulb. The standard
and non-standard bulb sockets are configured and dimensioned to operatively
receive only standard and non-standard bulbs, respectively. Preferably the
standard bulb socket is smaller than the non-standard bulb socket in at least one
10 dimension such that the standard bulb socket cannot operatively receive a non-
standard bulb, and the non-standard bulbs have at least one dimension greater
than that of the standard bulbs, thereby to preclude operative receipt of a non-
standard bulb in a standard bulb socket.
